X-RAY CHEST (PA VIEW) — REPORT

Patient Name:	Kavita Rao (Synthetic)	Patient ID:	SYN-XR-3087
Age / Sex:	45 Y / Female	Report Date:	2026-05-30
Referring Doctor:	Dr. N. Kulkarni (Synthetic)		
Body Region:	Chest (PA View)	Modality:	X-Ray

CLINICAL HISTORY

Persistent cough for 3 weeks, mild fever. Rule out consolidation.

FINDINGS

The lung fields show mild patchy opacities in the right lower zone, suggestive of early infective consolidation. Left lung field is clear. Cardiac silhouette is within normal limits. Both costophrenic angles are clear. No evidence of pleural effusion or pneumothorax. Visualized bony thorax appears unremarkable.

IMPRESSION

- Findings suggestive of early right lower zone infective consolidation — clinical correlation advised.
- No pleural effusion or pneumothorax.
- Cardiac size within normal limits.

RECOMMENDATION

Clinical correlation with the treating physician is recommended. Follow-up imaging may be advised after treatment if symptoms persist.
